VoIP made easy

Simplicity is the key

This serverless phone system from Avaya has all its technology built into the handset, which facilitates rapid installation. In turn, it reduces office set-up costs whilst increasing reliability.

Quick Edition provides an easy transition for users of key systems and if any additional phones are required, you can just connect straight to the network.

Affordable

Buy extra phones as they are needed. Add them to the network without any costs for system administration.

Auto Attendant

Automatically answers and directs incoming calls.

Reduced access fees

Routing voice traffic over the WAN or internet can significantly reduce call charges. Quick Edition can also connect multiple remote branches and enables central management. Now even small offices can equip home-workers with the same features they have in the office, increasing productivity.

Centralised Management

Avaya Quick Edition allows you to configure or upgrade multiple locations at the touch of a button. This reduces the administrative burden of configuring each unit individually.

Caller logs

Stay aware of incoming and outgoing calls with the built in logging system.
